Based on patent WO 9902042 A23G-009/00 BR 9811662 Α

Abstract (Basic): WO 9902042 A

A frozen dessert comprises a base of ice cream containing lactic bacteria, coated on at least part of its surface, or disposed within or between an edible support, this edible support is free from lactic bacteria and comprises fermentable fibres that specifically support the growth of the lactic bacteria within the intestinal tract.

USE - Prevention and treatment of gastro-intestinal disorders by excluding pathogenic bacteria from human intestinal cells, strengthening the human immune system against external attack, and increasing the absorption of minerals.

ADVANTAGE - By separating the lactic bacteria from the support fibres, a greater proportion of the lactic bacteria is viable when eaten; the presence of the fibres in the gastrointestinal tract then supporting the bacteria and increasing their effect.
